9. Minimum term of 12 months.
10. Prices are on a per user, per month basis.
11. Prices are in NZD and AUD, are exclusive of tax and are subject to change.
12. Prices valid from January 2023.

Product Descriptions

TimeTrak Professional:

[A user who only has access to the TimeTrak Professional website.](#)

The Professional user predominately accesses the TimeTrak Platform from a PC using a keyboard and mouse. Users are typically Service Co-ordinators, Schedulers, Administrators or Professional Services time recorders. TimeTrak Professional is designed to be a great scheduling tool, allowing Service Co-ordinators and team leaders to organise workloads of others (or themselves) easily and quickly. Management and administration would also use TimeTrak Professional as an overview tool for timesheet approval, Payroll management and to access the reporting features.

TimeTrak Mobile or App:

[A user who only has access to the TimeTrak Mobile website and TimeTrak App.](#)

TimeTrak Mobile is for users who are out in the field or factory floor. They have smaller devices like a tablet or smartphone with them, checking into activities, recording time, adding materials, checklists etc. as they are required.

Schedule Only:

[A user who cannot login to TimeTrak Professional and Mobile websites or the App.](#)

This is a user who cannot log into TimeTrak Professional and Mobile websites or the TimeTrak App but is visible to other users who have access to TimeTrak Professional and Mobile websites of the TimeTrak App. This user is on the Payroll and works for the organisation consistently but would never have their own device or login.

An Apprentice is a good example, or members of a team who have a team leader with a device where they are all working on the same job, and the team leader enters their time for them. This license type allows a lower price point for a user that will only ever be scheduled.

Equipment:

[Equipment licensing is for organisations that need to schedule equipment and machinery.](#)

Equipment licensing is for organisations that need to schedule equipment and machinery. Typically, it would be equipment that goes out with a user or a team, and we want to track who is using it. Or it is a piece of machinery in a factory environment that we need to capacity plan for, and optimise for production. Equipment can be scheduled, and have hours recorded against it.
